## Understanding Bone Grafting and Dental Implants with Esthetic Demands

The era of placing implants with disregard to esthetic outcomes is over. Patients are demanding function and esthetics. Treating sites with soft and hard tissue loss is challenging in dental implantology. This evening program will highlight different clinical situations and the treatment involved in overcoming the challenges. Advances in 3-D technology, digital work flow, and computer generated guides has transformed the way we practice implantology. We will apply these concepts in managing cases ranging from single tooth replacement to full mouth rehabilitation.

At the completion of the course, participants will be able to understand:

- Various classification for extraction sockets
- Use of different bone grafting materials including growth factors
- Tissue sculpting for creating emergence profile

## Program at a glance

<b>Date</b>	Tuesday, May 23, 2017
<b>Time</b>	5:30 - 6:00 pm <i>Registration and dinner</i> 6:00 - 9:00 pm <i>Lecture presentation</i>

## Featured speaker

**Abbey Sayed, DDS, MS**, started his dental career at Columbia University in New York, obtaining his doctorate and general practice residency degrees. His love of complex treatment planning took him to London where he obtained a Master's degree in prosthodontics

and worked on some of the most extensive full mouth rehabilitation cases in the United Kingdom. Family ties brought Dr. Sayed back stateside, where he completed an advanced fellowship in implantology at Brookdale University Hospital in New York. To further diversify his surgical skills, Dr. Sayed earned a specialty certificate in periodontology at the University of Michigan in Ann Arbor, and since then, has limited his practice to periodontics and implantology. He is a board certified periodontist, a Diplomate of the American Board of Periodontology, and on the faculty at University of Michigan. To date he has placed over 6,000 dental implants.
